QUESTION: If you could design the Ultimate Math class, what would that look like? What would you do differently if you were the teacher/designer?
There would be electronics with apps on it to help teach the students
Posters
People who struggle would get a lot of help
Nothing I like the way it is
My math class would be really fun doing math games and using technology in class
Make math funner and easier
Like any other math class.
Less graph paper use computers for graphs and don't force kids to work as a group
it would look all white , desk, board, etc and a few supervisors to help the students
It would have a helping and caring environment
It would be a technology math room with all kinds of technolegy
Instead of having to choose meth or science in grade 8 Everyone can try academic first then the teachers assign our classss
If I could design the Ultimate Math class it would have iPads to solve problems, have a friendly surrounding. If I was a teacher I would be nice to my students and help them when ever they needed it.
If i could design the ultimate math class i would make it look so high tech and futuristic like if it was the year 3005. What i would do differently if i was the teacher /designer is let everyone keep an ipad and they would do all there work in the iPad , by removing pencils papers erasers and ect.. the classroom would be cleaner and more organized . And homework would never be lost by sending it and saving it to your google drive accs.
If I could design a ultimate math class it would look like a room full of math technology.& if I was a teacher or a designer the room would look differently.
I wouldn't really wanna teach math
I would use lots of technology and math materials
I would show kids how to do the problem
I would make sure every student would get the concept I was teaching even if it took my own time. Also would have snack time
i would make everything fun and hands-on things
I would make every math class really fun and tell the students how to do it step by step.

I would like there to be a large amount of concrete materials for people to use so they can learn visually and physically. I would also allow the students to use their PED's for help like using the calculator.
I would let each individual do the same work, however if they work better independently they can do that, or if they work well in groups they can do that. The student is in charge of themselves and can chose the way they want to do the work, according to what is best for them.
I would let all of my students use any electronic device but I would be very strict with them about social media and taking pictures. I would ask one of my students a math problem every ten mins
I would do more work using concrete materials
I would design more tools for kids so that it's more easier for kids to learn.
I would be very calm and never get mad, and make students do hard work for something in return
I would anything
I will put all math things on the wall
I think it will just be doing what my teachers do
I could design my math class with shapes and art made of shapes. I'll be teaching shape patterning.
honestly I think that this class is already really good and well organized, like the projects for each unit is a smart idea. I don't really know what to do differently as the class is already fine .
Have more hands on work
By Going step by step and try to make them understand more about the question
All the kids would enter the classroom by means of water slide. There would be no homework, I would dress stupidly and dance in front of class. Everything would be explained through song, and at the end of the day, we all get cotton candy. More like a circus than a math class.
A understanding teacher that likes to make math class fun
A class that would have textbooks explaining certain concepts thoroughly. Computers available for student use. Rewards for certain accomplishments such as, figuring out a hard question (that nobody else could finish) with ease, in a small amount of time. And a very social class to ask and talk about the task at hand, to help anybody in need.
A class full of math problems
